**[Aims]**

Breast cancer represents the front runner in cancer research in many aspects. First, this is a common, chronic and lethal disease where medical interventions are successfully inducing a continuous decline in mortality in spite of increasing incidence. Second, biology drives the entire diagnostic-therapeutic work up of these patients. This is why, nowadays, a breast multidisciplinary team should also include pathologists, molecular biologists, oncogeneticists besides the "classic" clinical specialties. Third, many highly effective interventions are available for each step of the diagnostic and therapeutic work-up of these patients. The increased complexity of the disease, the availability of multiple effective choices and the high expectations of our patients are raising the bar of clinical excellence in this field.

With this goal in mind, the Programme of this international Conference includes lectures on molecular characterization, updated treatments of early and advanced disease, management of difficult cases and hereditary syndromes.

Clinical case discussions and debates are planned to allow a continuous and fruitful exchange of experiences and opinions between speakers and participants.

This 11<sup>th</sup> Breast Cancer Conference includes a highly qualified international faculty, but will maintain its characteristics of a friendly forum where international opinion leaders and attendees will exchange experiences and share the most exiting advances.

In order to reward scientific excellence and to foster international cooperation, the International Scientific Committee of the 11<sup>th</sup> AIBCC will award the 5<sup>th</sup> International Prize for Breast Cancer Research to a scientist who has published a breakthrough paper in the previous year.

We welcome medical oncologists, pathologists, breast surgeons, radiation oncologists and basic scientists to listen to breast cancer leaders and to exchange experiences in a friendly atmosphere.
